Glossary of Terminology

Term	Definition
Applicant	Bellrock Offshore Wind Farm Limited, the legal entity submitting Section 36 Consent and Marine Licence applications for Bellrock Wind Farm Development Area.
Bellrock Offshore Wind Farm (or the Bellrock Project)	<p>An offshore wind farm capable of exporting up to 1.8 GW of renewable energy to the National Electricity Transmission System.</p> <p>The Wind Farm Development Area is located 120 km east of Stonehaven, and will connect to the National Electricity Transmission System at the proposed SSEN Transmission Hurlie substation, west of Stonehaven in Aberdeenshire. The Bellrock Offshore Wind Farm comprises of the following Development Areas:</p> <ul style="list-style-type: none"> ▪ Wind Farm Development Area; ▪ Offshore Transmission Development Area; and ▪ Onshore Transmission Development Area.
Construction works	<p>Works to install the Wind Farm Infrastructure as authorised by the Wind Farm Development Area Section 36 Consent/Marine Licence, such as:</p> <ul style="list-style-type: none"> ▪ Site preparation works undertaken after commencement of construction; ▪ Pre-installation surveys (intrusive and/or non-intrusive); ▪ Placement on or installation in the seabed of anchors and associated scour protection, and mooring lines, and associated scour protection; ▪ Towing or transportation of the floating offshore unit to the Wind Farm Development Area from a port or wet storage facility; ▪ Floating offshore unit installation and commissioning, including hooking-up to the pre-installed mooring system; ▪ Trench excavation for inter-array cables; ▪ Laying of inter-array cables in or on the seabed and, associated cable protection; ▪ Installation of subsea cable hubs, including placing of associated foundation; ▪ Final commissioning following cable connections and snagging; and ▪ Post installation surveys.
Commencement of construction	<p>Commencement of construction to install the Wind Farm Infrastructure as authorised by the Wind Farm Development Area Section 36 Consent and Marine Licence (excluding site preparation works), being the earlier of:</p> <ul style="list-style-type: none"> ▪ Intrusive pre-installation surveys; ▪ Placement on or installation in the seabed of anchors and associated scour protection, and mooring lines; ▪ Trench excavation for inter-array cables; or ▪ Trenching for, or laying of inter-array cables on or in the seabed.
Innovation and Targeted Oil & Gas	<p>A Crown Estate Scotland leasing round for offshore wind projects, under which the Sinclair Offshore Wind Farm and the Scaraben Offshore Wind Farm were awarded Exclusivity Agreements for their respective Wind Farm Development Areas, under which early-stage development works are progressing.</p>

Term	Definition
Inter-array cable	Armoured cable containing electrical and fibre optic cores, which link the wind turbine generators to each other and to the subsea cable hubs and/or the offshore substations and include dynamic inter-array cable and static inter-array cable sections.
National Electricity Transmission System	The high-voltage electricity power transmission network serving Great Britain which receives electricity from generators (such as offshore wind farms) and transmits that electricity to anywhere on the National Electricity Transmission System to satisfy demand.
Site preparation works	<p>Preparatory activities undertaken within the Wind Farm Development Area prior to the commencement of construction of the Wind Farm Infrastructure, which may comprise (and which may require separate consents):</p> <ul style="list-style-type: none"> ▪ Geophysical surveys, geotechnical surveys and non-archaeological/archaeological diver/ remotely operated vehicle surveys; ▪ Seabed preparation including sand wave levelling, slope levelling for gravity based anchors (if selected), boulder clearance, and pre-lay grapnel runs; ▪ Unexploded ordnance survey and/or clearance; ▪ Debris clearance; and ▪ Out of service cable/pipeline removal.
SSEN Transmission Hurlie substation	The onshore substation to be developed by SSEN Transmission, which will receive renewable electricity from the Bellrock Project onshore substation and allow supply of renewable electricity from the wind farm to the National Electricity Transmission System.
Towing	Transportation of a floating offshore unit or floating substructure between a port, and/or wet storage facility and/or the Wind Farm Development Area.
Wet storage	The temporary storage/anchorage of floating substructures and/or floating offshore units prior to their transportation to the Wind Farm Development Area.
Wind Farm Development Area	The boundary within which the Wind Farm Infrastructure will be constructed, operated and maintained, and decommissioned.
Wind Farm Infrastructure	Infrastructure located within the Wind Farm Development Area including wind turbine generators; floating substructures, station keeping systems and associated scour protection; inter-array cables and associated cable protection; subsea cable hubs; and ancillary infrastructure including buoys (including activities associated with the Wind Farm Infrastructure construction, operation and maintenance, and decommissioning).
Wind turbine generator	A wind turbine generator converts wind energy into electrical energy. The main components include rotor assembly (composed of three blades and a hub); nacelle (containing the generator, shaft and gearbox, power electronic converter and transformer); and a tower (containing lifting equipment and switchgear).

Glossary of Abbreviations

Term	Definition
AR7	Allocation Round 7
BDMPS	Biologically defined minimum population scale
CEA	Cumulative Effect Assessment
CEF	Cumulative effects framework

OnTDA	Onshore Transmission Development Area
RIAA	Report to Inform Appropriate Assessment
TGN	Tyco Global Network
WFDA	Wind Farm Development Area
ZoI	Zone of Influence

1 CEA Long List of Projects

1.1 Introduction

1. This Appendix outlines the plans and projects screened as part of the Cumulative Effects Assessment (CEA) for the Bellrock Wind Farm Development Area (WFDA) and supports **Chapter 5: EIA Methodology (Volume II)** of the Bellrock WFDA EIA Report.
2. The relevant legislation and guidance for the CEA is detailed in **Chapter 5: EIA Methodology (Volume II)**.
3. A CEA has been undertaken for each technical topic in **Chapters 6 – 19 (Volume II)** of the Bellrock WFDA EIA Report, for those impacts that have the potential for cumulative effects with the following exceptions:
 - In line with the Institute of Environmental Management & Assessment (IEMA¹) guidance (IEMA, 2022), no CEA is undertaken for **Chapter 17: Greenhouse Gas Assessment (Volume II)**, because cumulative effects in relation to greenhouse gases (GHGs) do not require assessment, given the receptor is the global climate and there is no basis for selection of projects to include at this scale.
 - There is also no basis for a CEA for **Chapter 18: Climate Change Risk (Volume II)** as it is highly unlikely that the climate change risk of the Bellrock Wind Farm Infrastructure will be significantly affected by neighbouring developments, as the Bellrock Wind Farm Infrastructure is considered isolated from other infrastructure.
 - There is no CEA undertaken for **Chapter 19: Major Accidents and Disasters (Volume II)** due to the distance between the Bellrock WFDA and neighbouring projects, and because risks would also be minimised through the adoption of industry good practices and adherence to safety measures.
4. Marine Directorate – Licence Operating Team (MD-LOT) were consulted during the screening process as part of ongoing consultation in the pre-application phase.

1.2 Cut-off Period for Project Inclusion in CEA

5. In accordance with the guidance documents set out in **Chapter 5: EIA Methodology (Volume II)**, other plans or projects that are deemed likely to go ahead or are going ahead, and for which sufficient information is available, have been taken forward for consideration. With the exception of marine mammals and ornithology, this Appendix presents the CEA screening and has been based on a four-month cut off period for other plans and projects which represents a later cut-off

¹ IEMA has been renamed to the Institute of Sustainability and Environmental Professionals (ISEP).

than the six months that was proposed in the Bellrock WFDA Scoping Report (**Appendix 1.1 (Volume IV)**).

6. The Bellrock WFDA EIA Report has taken account of the phase of other plans and projects (i.e. scoping, application, consent, construction, operation) publicly available as of the start of December 2025, approximately four months prior to the submission of the Bellrock WFDA consent application. The Applicant considers this appropriate to provide recent information on other projects whilst allowing sufficient time to undertake a robust assessment. The following topics are an exception to the four-month cut-off period due to the long preparation period for these topics:
 - Marine mammals have been screened based on a six-month cut-off of October 2025 (in line with the Bellrock WFDA Scoping Report (**Appendix 1.1 (Volume IV)**)), due to the need (and time associated) to consider modelling in the CEA process. The Applicant considers this appropriate to inform the CEA; and
 - As agreed with NatureScot in February 2025 (**Chapter 5: EIA Methodology (Volume II)** and **Chapter 10: Ornithology (Volume II)**), the North East and East Ornithology Group (NEEOG) led cumulative work package has been used to inform cumulative/in-combination assessments for ornithology, therefore the ornithology CEA screening uses the NEEOG Interim Cumulative effects framework (CEF) project, using the most recently update available, being April 2025. Details are provided in an Annex to **Appendix 10.4: Population Viability Analysis (Volume IV)** of the Bellrock WFDA EIA Report. The Applicant considers this appropriate to inform the CEA. The Applicant has also undertaken a review of the in-combination assessment conclusions presented in the **Bellrock WFDA Report to Inform Appropriate Assessment (RIAA) Part 3: SPA and Ramsar Assessments - Ornithology (Volume VI)** to review whether assessment conclusions presented in the RIAA would be likely to change as a result post-March 2025 updates. This review (**RIAA Part 3 Appendix B: In-combination Assessment Update (Volume VI)**) has been undertaken in light of changes since the end of March 2025 cut-off for projects included in the quantitative assessment of collision risk and/or displacement effects, when considering the Bellrock WFDA in-combination with other offshore windfarm developments. Further details on the approach for specific receptors are discussed in technical chapters (**Chapters 6 – 19 (Volume II)**) as appropriate.

1.3 The Cumulative Effects Long List Screening

7. This Appendix presents the cumulative effects long list screening exercise that has been undertaken to identify other relevant plans and projects which may have a cumulative effect on each receptor identified in **Chapters 6 – 19 (Volume II)** of the Bellrock WFDA EIA Report. The screening process is detailed in **Chapter 5: EIA Methodology (Volume II)**.
8. The screening exercise takes account of the specific zone of influence (Zoi) of each receptor. The Zoi of impacts is established in each technical chapter and used to establish CEA screening ranges, as provided in **Table 1.2** outlines the screening categories for each plan and project. It is noted that the Zoi ranges vary significantly between technical chapters, as does the type of plan or project that could contribute to a cumulative effect. Zoi may also vary for receptors within technical chapters (for example between different species), and this is discussed in each technical

chapter where appropriate. Consideration is also given to whether cumulative effects could arise from ongoing activities (including maintenance activities from operational projects), or if these activities form part of the baseline. The screening exercise also considers the pathways (spatially and temporally) and magnitude of effect, in order for the CEA to remain proportional. The screening ranges are the basis of the long list of CEA projects and plans, shown in **Table 1.4** to **Table 1.11**.

9. Each plan or project in the long list is categorised and assigned a Tier (as discussed in **Chapter 5: EIA Methodology (Volume II)**), depending on the certainty that can be applied.
10. For some plans and projects within screening ranges there may not be sufficient information to undertake an assessment (noting the level of information required depends on the technical topic and type of assessment involved). Accordingly, plans or projects which do not have sufficient publicly available information have not been cumulatively assessed in detail.
11. Each technical chapter analyses the potential impact pathways with the Bellrock Wind Farm Infrastructure, so only other plans and projects which are likely to result in a significant cumulative effect with the Bellrock Wind Farm Infrastructure are taken forward to the CEA assessment stage for each topic.
12. Although site preparation works will be undertaken ahead of the commencement of construction of the Bellrock Wind Farm Infrastructure, these activities have been assessed as construction activities in the topic impact assessment chapters for completeness and robustness. Therefore, the impact assessments have assessed one year of site preparation works plus seven years of construction activities (overall eight years of activities associated with the Bellrock Wind Farm Infrastructure).

1.4 Screening Categories

13. For the purposes of the CEA, the criteria for other plans or projects (including both offshore wind and non-wind related) that have been considered includes plans and projects:
 - Already constructed;
 - Under construction;
 - Permitted application(s), but not yet implemented;
 - Submitted application(s) not yet determined; and
 - Plans and projects which are “reasonably foreseeable” including:
 - Projects in Scottish waters;
 - Projects in English waters, or other non-UK parts of the North Sea if considered to be relevant, have connectivity, or the potential of a cumulative effect; and
 - Any proposed project that has submitted a Scoping Report up to four² months prior to the Bellrock WFDA consent application date;

² See exceptions discussed in **Section 1.2** above.

14. All plans, projects and activities identified within the search area were found through desktop study of the following data sources:
- Marine Scotland website (<https://www.marine.gov.scot/>);
 - Crown Estate Scotland website (<https://www.crownestatescotland.com/>);
 - The Crown Estate website (<https://www.thecrownestate.co.uk/>);
 - European Marine Observation and Data Network (EMODnet) data (<https://emodnet.ec.europa.eu/en/>);
 - The European Marine Energy Centre Ltd (EMEC) (<https://www.emec.org.uk/>);
 - Cefas (<https://data.cefas.co.uk/view/407>);
 - Kingfisher Information Service – Offshore Renewable & Cable Awareness (KIS-ORCA) (<https://kis-orca.org/>);
 - North Sea Transition Authority (NSTA) website (www.nstauthority.co.uk);
 - National Grid (<https://www.nationalgrid.com/>);
 - Ports and Harbours of the UK website (www.ports.org.uk);
 - Oceanwise website (www.oceanwise.eu); and
 - Developer and project proponent websites.
15. The initial 'long list' of plans or projects has been developed based on the above criteria, and was screened for each potential impact-receptor pathway using the following process:
- **Conceptual overlap:** an impact-receptor pathway (in EIA terms) describes an impact which has the potential to directly or indirectly affect the receptor(s) in question;
 - **Physical overlap:** ability for impacts arising from the Bellrock Wind Farm Infrastructure to overlap with those from other plans or projects on a receptor basis. An overlap of the physical extents of the impacts arising from the two (or more) projects/plans must be established for a cumulative effect to arise. There are exceptions to this for certain mobile receptors that are potentially subject to impacts from multiple plans or projects; and
 - **Temporal overlap:** for a cumulative effect to arise from two or more plans or projects, a temporal overlap of impacts arising from each must be established. Some impacts are active only during certain phases of development (e.g. piling noise during construction). However, the absence of a strict overlap may not necessarily mean there is no potential for cumulative effect, as receptors may become further affected by additional, non-temporally overlapping projects.
16. **Table 1.1** outlines the screening ranges adopted for each technical chapter. **Table 1.2** outlines the screening categories for each plan and project.

Table 1.1: Chapters and Screening Ranges

Bellrock WFDA Chapter Number and Name	Screening Range
Chapter 6: Marine Geology, Oceanography and Marine Processes	Bellrock WFDA + 5 km buffer (and Bellrock WFDA + 72 km buffer for stratification related effects)
Chapter 7: Benthic Ecology	Bellrock WFDA + 10 km buffer
Chapter 8: Fish and Shellfish Ecology	Bellrock WFDA + 10 km buffer (and Bellrock WFDA + 60 m buffer for piling related effects)
Chapter 9: Marine Mammals	Based on the management unit of the reference populations. ¹
Chapter 10: Offshore Ornithology	<p>Projects within the foraging range (of seabird species considered within the assessment) of the Bellrock WFDA during the breeding season, and, except for guillemot, within the relevant biologically defined minimum population scale (BDMPS) during the non-breeding season were considered.</p> <p>For guillemot during the non-breeding period, the same region as for the breeding season was used, in accordance with NatureScot advice (Chapter 10: Ornithology (Volume II)).</p>
Chapter 11: Commercial Fisheries	All projects in the North Sea.
Chapter 12: Shipping and Navigation	Bellrock WFDA + 50 nm buffer.
Chapter 13: Aviation and Radar	Bellrock WFDA + 100 km buffer (for offshore wind farms only)
Chapter 14: Marine Infrastructure and Other Users	N/A – Projects within 50 nm (92.6 km) of the Bellrock WFDA are included in baseline and the Applicant, along with all other users of the sea, will implement practices and procedures which would support the safe coexistence between the infrastructure and associated activities of their relevant projects and developments.
Chapter 15: Marine Archaeology and Cultural Heritage	Bellrock WFDA + 6 km buffer.
Chapter 16: Socioeconomics, Tourism and Recreation	All existing/proposed commercial scale offshore wind farms in Scottish/British waters are included due to supply chain.
<p>Notes:</p> <p>¹ Due to the size of the study area and range of activities that can result in cumulative effects, additional plans and projects (including Carbon Capture Storage Areas) have been screened in for Chapter 9: Marine Mammals (Volume II) and are further detailed in Appendix 9.4: Marine Mammal CEA Project Screening (Volume IV) of the Bellrock WFDA EIA Report.</p> <p>As outlined in Section 1.1: Introduction, no CEA is undertaken for Chapter 17: Greenhouse Gas Assessment, Chapter 18: Climate Change Risk (Volume II) or Chapter 19: Major Accidents and Disasters (Volume II).</p>	

Table 1.2: Colour Coding and Screening Categories

Colour	Screening Categories
	Included as part of the baseline and is therefore not considered within the CEA
	No pathway for effect and therefore not considered within the CEA
	Insufficient information available
	Potential for cumulative effect and therefore screened into the CEA

17. As the location of the Bellrock WFDA being offshore, the plans, projects and activities that are included in the Stage 1 (CEA long list) are mostly marine projects. The exceptions to this are coastal projects, which have also been included in the CEA as appropriate.
18. The colour coding for projects' status is demonstrated in **Table 1.3**.

Table 1.3: Project Status Colour Coding

Colour	Project Status
	In Planning (i.e., scoping, consent application submitted, or consented/pre-construction)
	Construction
	Operational/Active
	Decommissioning/Decommissioned
	Currently Unknown/Closed

1.5 Notes on 'Other Projects'

19. As detailed in Section 5.12 of **Chapter 5: EIA Methodology (Volume II)**, whilst the Bellrock Offshore Transmission Infrastructure and Onshore Transmission Infrastructure form part of the Bellrock Project, these components will be subject to separate applications for consent. As each constitutes EIA development, the Offshore Transmission Infrastructure and Onshore Transmission Infrastructure will be subject to further EIA under the relevant EIA Regulations, and the Applicant will prepare and submit further EIA Reports in support of the respective applications.

20. It has not been possible for the Applicant to seek consent for the Offshore Transmission Infrastructure and Onshore Transmission Infrastructure simultaneously with the Wind Farm Infrastructure³. However, this Bellrock WFDA EIA Report considers the relationship and interactions between the Bellrock Wind Farm Infrastructure and those other components of the Bellrock Project. The likely significant effects of the Bellrock Wind Farm Infrastructure together with the Bellrock Offshore Transmission Infrastructure and Onshore Transmission Infrastructure, so far as these can be ascertained at this stage, are assessed as part of the Bellrock WFDA EIA Report.
21. Cumulative impacts with the Wind Farm Infrastructure are at this stage considered as part of the CEA presented within the Bellrock WFDA EIA Report. The EIA Reports to be submitted in support of the OfTDA and OnTDA applications will include an updated assessment of the interactions between the different components of the Bellrock Project and the effects of the Bellrock Project as a whole.
22. Projects that have been cancelled as of the time of writing which are not presented in **Table 1.4** below, include Irish offshore wind farm planning applications submitted prior to the development of a Designated Maritime Area Plan (DMAP) designation in Ireland:
- Braymore Point/Setanta Wind Park;
 - Clogher Head; and
 - Cooley Point Offshore Wind Farm.
23. Further, **Table 1.4** includes several projects that have been discontinued in their current form but were nevertheless incorporated into the CEAs for various topics. For example, in November 2025 Shell returned the Option to Lease for the CampionWind project to CES. In agreement with MD-LOT, CampionWind continues to be included in this CEA screening process. Hornsea Four was effectively discontinued on 7 May 2025, when Ørsted announced it was ceasing further development due to rising supply-chain costs, higher interest rates, and increased execution risks. However, as the project remains consented and has already been included in the Bellrock WFDA Offshore Ornithology CEA, it continues to be included within this CEA screening process.

1.6 Long List Tables for CEA Screening

24. Tables are presented below for the Bellrock WFDA EIA CEA screening.
- **Table 1.4** presents the long list of other offshore wind farm projects and plans;
 - **Table 1.5** presents the long list of wave and tidal projects and plans;
 - **Table 1.6** presents the long list of marine aggregate projects and plans;

³ At the time the Scoping Request for the Bellrock WFDA was submitted (March 2024), the Bellrock Project's grid connection solution was a coordinated connection to an offshore substation. However, in April 2025 the National Energy System Operator (NESO) imposed a change to the Bellrock Project's grid connection, with this revised to an onshore connection to the proposed Hurlie substation in Aberdeenshire. As a result, the site selection processes for the Bellrock OfTDA and OnTDA remain ongoing, and it has been necessary for the Applicant to make a separate application for the Bellrock WFDA.

- **Table 1.7** presents the long list of subsea cables and telecommunications projects and plans;
- **Table 1.8** presents the long list of wet storage projects and plans;
- **Table 1.9** presents the long list of military exercise areas projects and plans;
- **Table 1.10** presents the long list of disposal site projects and plans; and
- **Table 1.11** presents the long list of oil and gas projects and plans.
