Custom Driver

CF

The Custom Driver is a progressive design that includes a wide distance area for comfortable viewing across the full width of the windscreen.

The intermediate area is perfect for reading dashboard gauges.

Power Range	Not limited by CrossbowsRx
Corridor	20mm
Additions	+0.75D to +3.50D in steps of 0.25D
Index	All indices are available

Fields of Vision

Ideal For

Professional drivers / long commuters

Additional Features

- > MaxView
- > OptiEdge
- > Variable Decentration
- > OptiPrism

Performance

Built In Technologies

CustomFORM is a cohesive approach to lens design, which considers a progressive lens as a single entity rather than an accumulation of individual points. It utilizes geometric building blocks (continuous splines and ellipses instead of separate points) at the time of creation to define the whole lens surface rather than simply minimizing distortion in primary parts of the lens. The intrinsically natural design results in a better overall performance, higher adaptation rates due to increased patient comfort and smoother contours making it easier to produce lenses.
