# Driving Business Growth

IT Director as a Service

Boardroom IT strategy  
and expert guidance

[myitdirector.co.uk](http://myitdirector.co.uk)

## Why bring on an interim IT Director?

We help organisations who have interim technology leadership requirements, or just want some expert guidance.

The IT Director as a Service offers clients the flexibility to only pay for the help you need, when you need it, with no long term commitment.

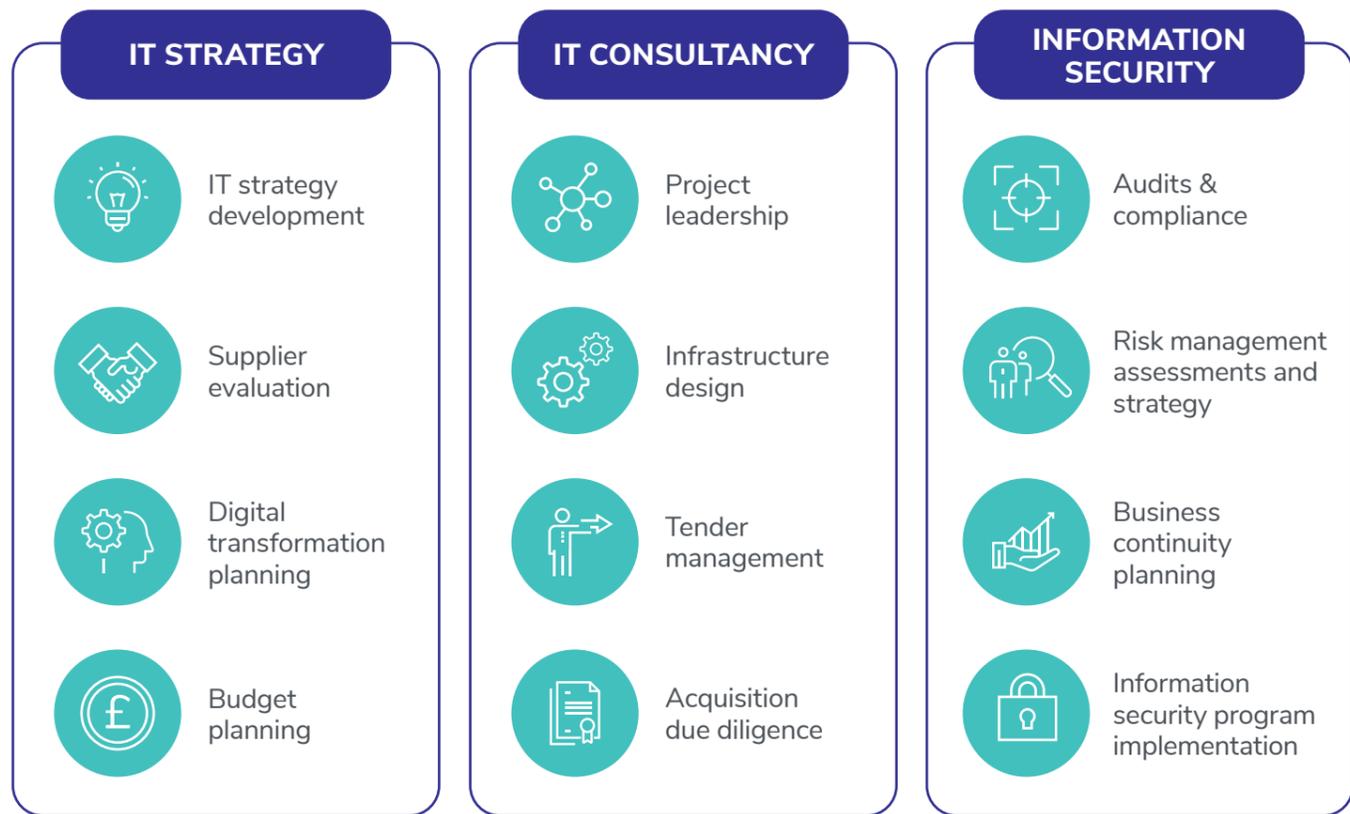

-  IT strategy has lost alignment with business objectives
-  Digital transformation has created a digital skills gap
-  IT projects are stalled or stuck with a lack of ownership

We work closely with the executive team to define a technology strategy examining both the immediate business goals and the longer term ambitions of an organisation.

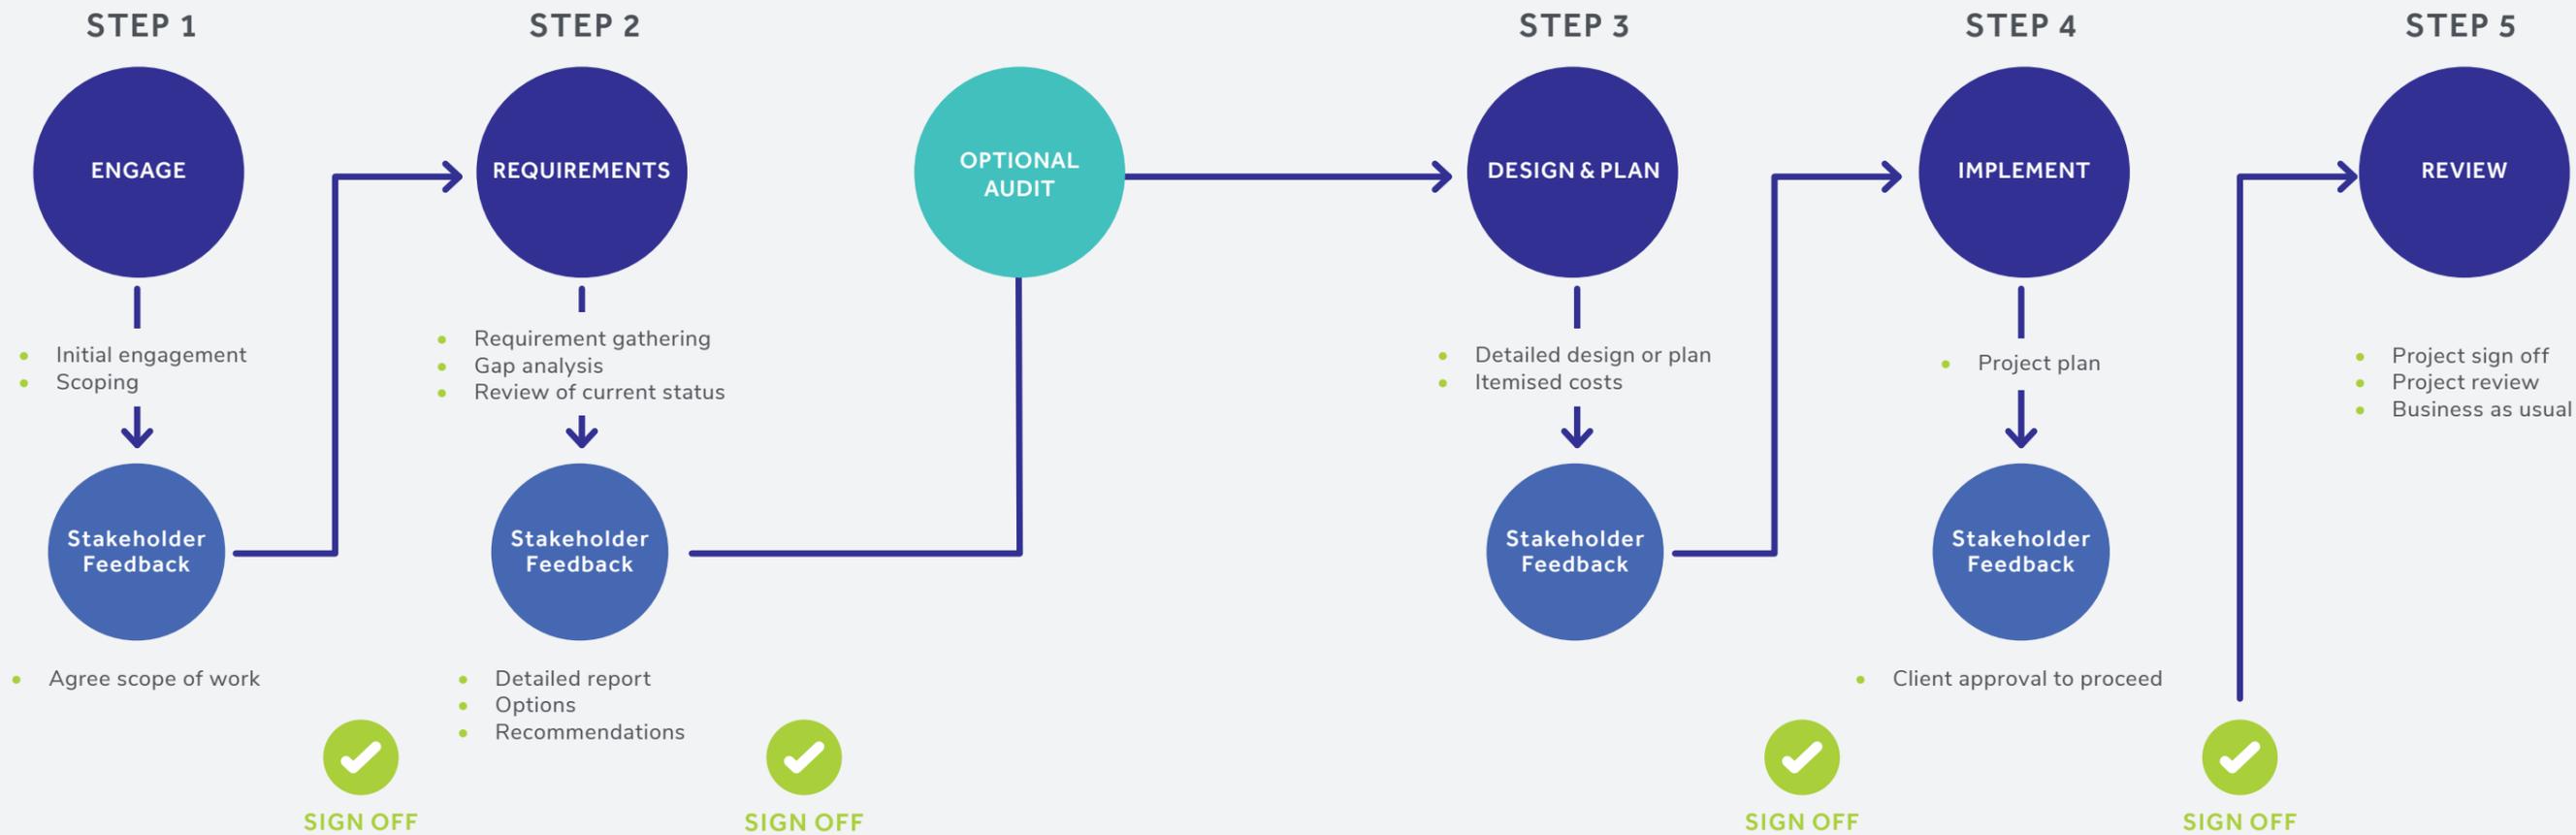

We offer an impartial service with full transparency in any tender process.

-  You are being targeted more and more by cyber criminals
-  Current internal IT teams are overloaded leaving no time for strategy
-  As the organisation has grown processes have become inefficient or costly

## Core Services

## Our Process

# The Business Case for a C-Level Advisory

- **Strategic Advice** – Assess if the current state and operating model is fit for purpose
- **Insight and Guidance** – Get a holistic view and define a future IT operating model
- **Accelerate Growth** – Put in place systems and processes to grow your business
- **Business Continuity** – Plan for the unexpected and assess disaster recovery plans

## Trusted by clients

### Pension provider to the plumbing, mechanical and allied services industry

Neil guided us through our information security and GDPR compliance journey from initial gap analysis to final certification. His guidance and patience were instrumental in the success of the project, his expert advice and detailed action plan ensured that we were able to identify areas of non-compliance and find practical solutions to help us recognise, record and reduce risk.

**Michael Lee, Projects and Compliance Manager, Plumbing Pensions**

Plumbing Pensions

### National Respite Centre with 95 staff offering personalised 24-hour care

Neil was great at helping us to identify the weaknesses in our existing infrastructure and to hold our hand through a change process. We are now able to provide an enhanced person-centered care through employing technologies including a digital assistant to help guests with modern technology, 100% Wi-Fi coverage throughout the house and tailored care plans through state-of-the-art digital care planning. This has been transformational.

**Mark Bevan, CEO**

### Leading, independent property specialists in Scotland and the North of England

Neil worked closely with us to create an IT Infrastructure plan for our real estate branch network that allowed the business to meet its growth strategy. The designed solution helped us complete the project on budget within a tight time-frame. The standardised approach allowed us to reuse the plan several times as our business grew as well as introduce better business continuity plans and disaster recovery capabilities.
