

MACHINE LOADING

SP Technology

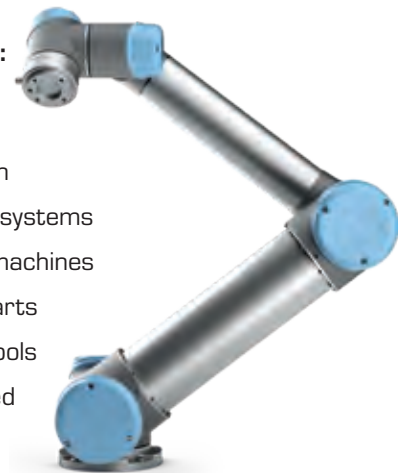

Automation & Robotics

Cost effective collaborative robots are an ideal way of achieving a reliable and flexible solution to your loading. With potentially no guarding required, these units can be “wheeled” into place and transferred between machines when required, for ultimate flexibility. SP can also offer larger dedicated systems. These machines are self-contained, having buffer storage and high availability and reliable repeatability. Another profitable solution is to automate multitasking machines or lathes with robots and have one person run multiple systems.

Key features and equipment:

- High reliability
- Flexible and low cost solution
- Single operator for multiple systems
- Portable - moved between machines
- Programmed for multiple parts
- Auto loading into machine tools
- Option for being vision guided
- Configurable
